

# Vibroacoustic Relaxer Chair

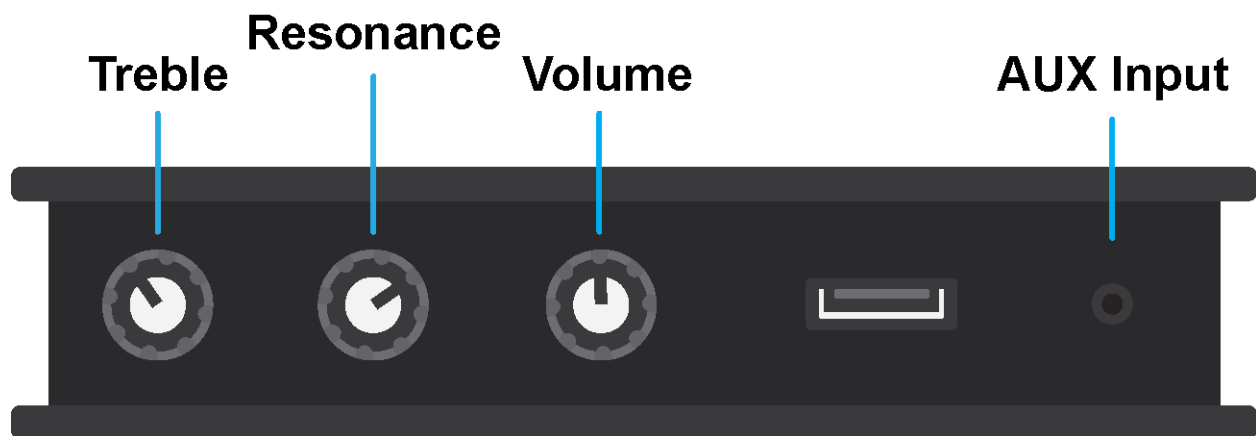

The reclining shape distributes body weight evenly and instantly encourages relaxation. By connecting to the Bluetooth amplifier, the relaxer becomes a vibroacoustic therapy tool and magnifies musical vibrations so they are felt more easily.

Vibration is a great way to get the proprioceptive input to calm and stimulate. The amount of vibration is completely adjustable with the choice of music and the base selection.

Please note, music will be muffled as this is not a speaker system but primarily for vibration therapy.

For best results, only use for a maximum of 30 minutes.

	Pair your phone or tablet to the Bluetooth amplifier named "Shaibang."
--	--

Make adjustments to the quality and volume of the music using the knobs in the black box to the right of the chair.
